First West Nile Virus Positive Mosquitoes Confirmed in Orange County

Garden Grove, CA. The Orange County Mosquito and Vector Control District (OCMVCD) has confirmed that mosquito samples in three cities have tested positive for West Nile virus (WNV). These are the first samples to test positive in the county this year. The positive mosquitoes were collected on July 7, 2020 in Cypress at Cerritos Ave and Lexington Dr, in Anaheim at E. Sycamore St. and East St. and in Garden Grove at Garden Grove Blvd and Stafford St. The District has also confirmed that one dead bird with WNV was collected in Irvine.

“West Nile virus positive mosquito samples indicates that the virus is active in Orange County and there is an increased risk for residents to become infected with WNV through a mosquito bite.” Said Robert Cummings, Director of Scientific Services.

West Nile virus is most commonly spread to people by the bite of an infected mosquito. Mosquitoes become infected when they feed on infected birds. There are no confirmed cases of human infections currently in Orange County.

The Orange County Mosquito and Vector Control District staff will continue to conduct surveillance, inspections, and control measures for mosquitoes in the areas to prevent additional mosquito breeding. OCMVCD will post WNV advisory signs alerting residents of high WNV activity in the affected areas.

“It is essential for residents to do their part and take charge of their yard,” said Lora Young, Director of Communications. “The best way to protect yourself is by applying EPA-registered repellent, wearing long sleeved clothing and eliminating potential breeding sources around your property.”

To learn more about West Nile virus visit: <https://www.ocvector.org/west-nile-virus>

Mosquito control is a shared responsibility. Orange County residents need to do their part to control mosquito breeding around their properties and prevent bites. Eliminating mosquito breeding sources is critical to preventing the spread of West Nile virus:

To prevent mosquito bites, take action and follow these tips:

- Dump and drain containers filled with water at least once a week
- Clean and scrub bird baths and pet water bowls weekly
- Dump water from potted plant saucers

For more information on how you can help reduce the risk of WNV in your community, visit www.ocvector.org.
